# SIPARILA

PASSION FOR WOOD

INTERIOR PRODUCTS

# Ideas for all your senses

WOOD OFFERS US  
THE OPPORTUNITY TO  
BUILD BY RESPECTING  
NATURE.

Wood has always been at the heart of Finnish culture. It has been used to build homes and to heat them, it has been worn and even made into food. Wood has had a significant place in the lives and homes of Finnish people. Wood is a renewable natural resource, and when it's used sustainably, it can provide us with the means to build in a way that saves energy and respects nature. Siparila takes this tradition of using wood further by creating design solutions for wood cladding and panelling focused on bringing warmth and beauty to the home with the help of Finnish designers.

Wood both inspires and fascinates us. Its versatility unlocks creativity and new ideas for interior design. Whether you wish to create a softer look for a modern apartment or bring some edge to an otherwise restrained home, the unique surface of wood suits a variety of purposes.

Finnish craftsmanship, top design and respect for nature all come together in Siparila's products; they're perfect for creating impressive combinations and exciting elements in your home design, according to your own taste. We believe that the mood of the home is created with your heart, and that it's at its best when it reflects its owner's life and personality. We are ready to whatever it takes to ensure that your home looks like it's yours, now and forever.

Juha Sojakka, CEO

CLASSIC SLEEK  
& MODERN  
ELEGANCE

# MATERIALS

High-quality interior panels are created using high-quality raw materials. Only the best materials, according to the application, are selected for Siparila interior panels. The choice of materials is used to create different shapes, textures, and characteristics.

## **KNOTLESS (EM)**

Knottles pine panels are virtually knot-free and therefore present the highest quality pine panel available. Our translucent pine panels are mainly manufactured in EM grade. Examples are the VIRE panel in sand colour tone and the KOO panel in grey tone.

## **FEW KNOTTED PINE (VM)**

In VM-grade pine panels, some small knots are allowed, but they are solid. With the right surface treatment, panels can be given a surface that suitably enhances the character of the wood - such as with USVA panels.

## **KNOTTED PINE (OM)**

Knotted pine is used in panels that allow for larger knots and a rougher appearance. However, there is no need to compromise on characteristics because these types of panels are also available with concealed fixing and end-jointing. Siparila's panels, such as ROSO and KUURA, which are opaque painted, are manufactured to OM quality grade and use a branch penetration retardant primer under the topcoat to ensure quality.

## **FINGER-JOINTED PINE**

Finger-jointed pine is a raw material that is almost branchless and straight, with finger joints. It is used in our opaque painted panels such as KIILLE and KASTE. Finger-jointed pine is also used in our interior mouldings because of its good properties.

## **GLUED PINE**

Glued pine wood is used to make wide panels, such as the AAVA panels. The glued pine allows the panel to be thin, while at the same time, the dimensional stability is easier to control compared to a solid wood panel of the same size

## **GLUED SPRUCE**

A glued spruce is used to make our popular STRUKTUURI panels, for example. The glued spruce allows the panel to be thin, while at the same time, the dimensional stability is easier to control compared to a solid wood panel of the same size. Spruce also allows the panel to be used in saunas as a raw material due to its low resin formation.

## ASPEN

Aspen is very suitable for saunas, as it is very rot-resistant and does not conduct much heat. The raw material for KUULAS sauna panels with prefinished surface treatment is aspen.

## BIRCH

Birch is a high-quality and beautifully light raw material for interior panels. Panels made of birch are mainly treated with varnish, which allows the natural look of birch to shine through. Our range of KOO and VALO interior panels is available in birch.

## EUROPEAN ASH

Ash is a noble wood, whose beautiful and natural colour variation with its grain patterns brings life to any wood surface. Ash is a dense, few knotted raw material used to make, for example, PURO and JALO interior panels.

## OAK

Oak is a classic wood for interior elements. Oak interior panels create a sense of dignity and a natural wood surface - for example, the VIRE interior panel in oak is a guaranteed eye-catcher.

# MOUNTING METHODS

## CONCEALED MOUNTING

Panels with concealed fixings create a seamless and stylish surface. Concealed fixing marks remain hidden with no holes in the panels from nail heads, from which water and contaminants could otherwise seep into the wood and damage it. Fixing is easy with hooks or nails, depending on the profile.

## TONGUE AND GROOVE

Panels with tongue and groove joints enable cutting panels independent of roof boarding intervals. Tongue and groove panels can be continued directly from the previous panel to the following panel with the seam remaining tightly in the original location. Using tongue and groove panels minimises material losses and saves time and money.

# TREATMENTS

Our pre-painted interior panels provide a beautiful, high-quality finish to any space. The treatments facilitate a clean finish as the panel surface has been subjected to a uniform industrial treatment. The different surfaces enhance the wood's characteristics beautifully. Thermal modification and fire-proofing further extend the range of applications for panels.

## OPAQUE PAINTING

Opaque painted panels are painted completely so that the wood material does not show through the finished surface. The result is always a beautiful, finished panel that can be installed immediately. Only the cut-off surfaces of the panel require treatment. Several different shades are available for the topcoat.

## TRANSLUCENT TREATMENT

The translucent varnish/wood stain treatment gives the panel surface a water-colour-like appearance, from under which the wood grain is beautifully visible. Translucent treatment is very durable yet looks natural on the surface of the panel. For example, the Sand tone of VIRE and USVA panels is translucent.

## SAUNA PROTECTION

Sauna protection is based on varnish treatment. It provides improved protection against moisture and dirt, for example with thermally modified products..

## FIRE-PROOFING

Fire-proofed interior panels enable construction in compliance with fire safety regulations. Most of our interior panel range is available with fire-resistant treatment under the highest fire protection class for wood, B-S1, d0. Fire-proofed interior panels are always manufactured as project products, allowing us to tailor the products to suit your exact needs.

## THERMAL MODIFICATION

Thermal modification uses heat and steam to modify the structure of the wood to change its properties. Thermal modification increases the durability of wood: wood does not experience dimensional changes related to temperature or humidity, making it highly resistant to the hot and humid conditions in bathrooms and saunas.

SNOWFALL

# AAVA

## EARTHY AND SERENE

The AAVA interior panels are like the endless sea that extends as far as the eye can see: soothing, bold, and inspiring respect. These wide panels made of Baltic redwood let you bring the boldness and grace of natural wood into a room. The translucent tinting on the panels emphasises the wood's natural and vibrant surface.

CREATE A RELAXING MOOD WITH NATURAL TONES

The AAVA is an elegant solution that brings character to an accent wall or the whole room.

The concealed fastening and end joints of the panels make it possible to create a seamless surface on the wall. The AAVA panels are available in three different shades with a brushed, translucent surface treatment. The finishing reflects light beautifully and brings a sense of space and airiness to any room.

# JALO

## NATURAL BEAUTY

The JALO interior panels are made from the ash wood. The ash is a sturdy and tough. These panels let you bring the soft warmth of natural wood and modern stylishness to a room. The translucent white surface treatment reveals the beautiful grain of the wood, and the grooves in the panels create a sense of character.

MAKE THE MOST OF  
WOOD'S WARM TONES

The JALO panels are narrow ash wood panels that are especially suited to be used as wall panelling in dry and damp rooms. Their light surface treatment lets the gorgeous grain of the wood show through, and the concealed fastening ensures that the surface remains uninterrupted and smooth. These panels are perfect for creating beautiful accent walls at home and in public spaces.

Translucent White

The JALO panels can also be used for creating rounded shapes (the radius must be 500 mm at minimum).

# KASKI

## THE STRONG SPIRIT OF WOOD

The bold and vivid KASKI panels are like Finnish spruce trees – sturdy, strong and self-assured royalty of the woods. The KASKI panels are the perfect finishing touch to any room with their bold personality that showcases the best characteristics of spruce wood. The KASKI combines the beauty and versatility of wood as a material.

The panels are made of thermally modified spruce which has been brushed to create a beautiful, vibrant surface.

The warm tone of the panels is a result of the thermal treatment, thanks to which the KASKI panels are suitable as wall and ceiling materials for a wide variety of rooms. As a material, thermally modified spruce is sauna-proof and can be installed in a sauna directly out of the package.

# KASTE

## FRESH AND HARMONIOUS

Imagine the early hours of the morning in the summertime, the dew lingering on leaves, and the first rays of the rising sun. The air feels soft and fresh. That is what the KASTE interior panels embody. Their surface treatment gives the panels an understated surface tone that is like the morning dew on a summer's morning. The KASTE panels let you create a refreshing, light and harmonious look for a room.

BRING THE FRESHNESS  
OF MORNING DEW  
INDOORS

The KASTE is a great choice for modern, Scandinavian and traditional interior design styles – the white colour of the panels is easy to combine with other colours in the room. You can install it horizontally or vertically; whichever pleases your eye the most.

White

The KASTE panels have protection against water splashes, which gives them even more applications for various rooms.

A dining room with a white round table and two black chairs. A chandelier hangs from the ceiling. A window with a white panel is in the background. The floor has a star pattern.

# KIILLE

## THE MAGIC OF LIGHT

When you wish to create a space where natural light appears to flood in through the windows, choose the KIILLE panel. It's pure, white surface reflects light beams and makes any space feel brilliantly luminous and airy. The KIILLE is a timeless, classic panel that you can use to create a variety of interior design solutions for any space.

EMPHASISE THE  
LUMINOSITY OF  
YOUR ROOMS

The KIILLE is a versatile panel that can be used on both walls and the ceiling. The panel is available as a straight-forward, modern version and as a bead panel with rounded corners that is perfect for a more traditional aesthetic.

Pure White

The concealed fastening ensures that there will not be any visible nail heads.

# KUULAS

## THE CHARMING UNIQUENESS OF WOOD

In Finnish, the word *kuulas* means something clear, bright, and translucent. It's a perfect name for the KUULAS sauna panels whose distinctive look is all due to the translucent hues found on the panels. They let the wood's natural, undisturbed grain pattern shine through like a mist that gently envelops a serene landscape in the distance. It makes every panel unique – just like your sauna.

POLAR NIGHT

The colour options for the KUULAS panels make it possible to create a pleasing contrast with your choice of sauna bench materials. The straight-edged design gives the panels a crisp and impressive appearance regardless of which colour you choose.

Steam

Polar Night

As the surface treatment used for the KUULAS panels lets the natural annual rings of the wood shine through, there may be tonal variations in the surface colouring of the panels, sometimes to a dramatic degree. This is what makes the KUULAS panels such a unique choice for sauna panelling.

PROTECT AGAINST WATER SPLASHES

CAN ALSO BE USED IN A SAUNA

CONCEALED FASTENING

The KUULAS sauna panels are made of aspen wood. Because aspen is a non-resinous wood that conducts heat slowly, it's a perfect choice for a sauna, where the feeling of all surfaces is essential.

The KUULAS sauna panels have a concealed fastening design which enables a nail-free, even and smooth surface immediately after installation. The concealed fastening also makes the panels more durable, as no water can penetrate the wood via nail holes.

The KUULAS panels will make sure that your sauna is a place where you'll love to linger just a moment longer.

## KUULAS-SAUNA PANELS

Form	Thickness	Width	Length	Open Seam	Color	Consumption	Coverage width	Raw material
STS	15 mm	120 mm	1800, 2100, 2400, 2700, 3000 mm	3 mm	Steam, Polar Night	9,52 m/m <sup>2</sup>	105 mm	Aspen

KUULAS panels are not end-jointed. For this reason, the panels must be leveled before installation.

THERMALLY MODIFIED SPRUCE

# PURO

## DELICATE AND LIVELY

“Puro” is the Finnish word for a brook, and a brook that’s babbling in the middle of the woods and gleaming in the sun is always a delightful sight. There’s nothing quite like catching the eye like a lively little brook, and that same liveliness is caught in the visual language of the PURO panels and their stripy surface. The PURO panels bring a delicate, light liveliness to any room.

THERMALLY MODIFIED SPRUCE

RATIA®

CREATE A DELIGHTFUL LOOK WITH VIVACIOUS WOOD

THERMALLY MODIFIED SPRUCE

The PURO is a pinnacle of Finnish design, and it was created by Design Studio RATIA, designer Laura Väre. In line with RATIA's design philosophy, the PURO panels can stand the test of time and make everyday life feel richer.

Pure White

\*Translucent White Ash

The PURO interior panels can be used in various rooms, including a sauna. The panels are available in four different shades, which means you can create a colour palette that suits your own style perfectly. The wood grain is especially visible in the thermally modified spruce panels which show off the wood's features in all their glory.

# RAILO

## CONTRAST AND BALANCE

Have you ever heard the ice singing in winter? That almost yodel-like sound is the result of the ice moving and its surface cracking – leading to deep grooves and cracks that break the surface of the ice. The smooth surface of the RAILO panels have faux grooves, that break up the even surface, just like cracks in the ice. The RAILO panels let you create bold contrasts or to balance the mood in a room.

TRANSLUCENT GRAY

The translucent grey RAILO interior panels create a soft, calm mood while opaque white brings a sense of airiness in a room.

The clear and elegant look of the RAILO panels make them easy to use on both walls and ceilings.

# VALO

## STREAMLINED LINES

The VALO interior panels are like a sunbeam peeking out behind the clouds, lighting up the whole landscape and stirring your emotions. You can use the VALO interior panels to create a fascinating combination of lighting and surface materials; you can install LED strips in the groove between the panels to replace ceiling lights. The grooves will stylishly hide the body of the LED strip but still show their illumination like the glow of the sun peeking out from between the clouds.

The VALO interior panels bring a lot of potential for interior design with their streamlined shape. These massive panels are elevated by the grooves that give the panels a stripy look. The VALO interior panels are designed by interior design architect Heli Mäkiranta.

The VALO panels are suitable for a wide variety of rooms, and their potential for interior design is further enhanced by the way they can improve indoor acoustics. The panels are easy to use for creating an impressive surface for walls and ceilings, and you can install luminaires directly onto the panels to highlight the wood's characteristics.

\*Available length to be checked when ordering. Vire is not end-jointed. For this reason, the panel must be leveled before installation.

# MOULDING

## FRAME YOUR HOME LIKE A BEAUTIFUL PICTURE

Siparila's collection of moulding has a wide variety of options and colours that can let you create charming and intentional details in your home. Find the perfect moulding for your taste and emphasise your home's characteristics with a stylish, natural look. Let your creativity run free, because the only limit is your imagination. The moulding in the KINOS, KUMPU, VANA and VIIVA collections are versatile multi-purpose moulding, which means that each type of moulding can be used both as a cover moulding and skirting board.

### KIILLE

The KIILLE interior moulding is a straight-edged and minimalistic moulding. It's perfect for a room where you want the finishing touch to be understated. The moulding in the KIILLE collection features separate options for skirting boards, crown moulding and cover moulding.

### KINOS

The KINOS moulding brings a sense of rich detailing to your interior design. The decorative KINOS moulding is perfect for finishing a room from top to bottom. The moulding can be used as cover moulding or skirting, and it's available in a wide range of widths up to 120 cm.

### VANA

The VANA interior moulding can soften modern interior design or bring a sense of calm to a romantic style. VANA moulding can be used both as cover moulding and skirting.

### VIIVA

The VIIVA moulding brings an understated and stylish finishing touch to your interior style. The moulding has a minimalistic and streamlined shape. The VIIVA moulding is a multi-purpose combination moulding that can be used both as cover moulding and skirting.

### KUMPU

The KUMPU interior moulding has a rounded, wave-like shape. The KUMPU interior moulding lets you create a charming sense of softness in the details of your interior style. It can be used both as cover moulding and skirting.

### JALOPUU

The JALOPUU moulding is made of ash wood and is shaped like KIILLE moulding. The JALOPUU moulding gives a stylish finish to ash wood panelling.

# SUSTAINABILITY

## Sustainable and healthy living while respecting the vitality of forests

Wood has always been the building material that Finns trust, and we hope to keep it that way. As industry pioneers, we are involved in strengthening a building culture that respects the vitality and health of forests and promotes sustainable and healthy living.

This requires us to continuously and actively develop operating models that promote the well-being of the environment and people. Sustainable development plays an essential role in our business, and product quality, sustainability and safety are the cornerstones of our operations.

As a building material, wood is a responsible choice, as it is environmentally friendly, renewable, and recyclable. Wood construction is one of the best ways to reduce CO<sub>2</sub> emissions from construction because the CO<sub>2</sub> emissions from wood construction are minimal compared to, for example, concrete structures.

## EPD for reliable and transparent measurement of environmental impact

Environmental Product Declarations (EPD) constitute a reliable way to present the environmental effects of products. Siparila's exterior cladding panels and thermally treated panels come with EPDs.

## Well-being of forests as the basis of operations

Forests are the foundation of the vitality and diversity of Finnish nature. The PEFC certification system ensures the well-being of forests internationally and guarantees that the wood has been harvested sustainably, respecting forest biodiversity. We want to play our part in ensuring that the forest's natural habitats and the opportunities for species to live remain strong now and in the future.

## Quality and safety first

In construction, it is important for the products used to be healthy and safe. All Siparila wood products are CE-marked and do not contain chemicals hazardous to humans or nature.

We are constantly developing new surface treatment methods to ensure our wood products look attractive and last long even in challenging weather conditions. Our investment in priming and coating methods has earned Siparila FI certification.

A spiral-bound notebook with a cream-colored page. The word "NOTES" is written in a simple, black, sans-serif font in the upper center of the page. The spiral binding is visible at the top edge.
